**10. YARD LIMITS**

(Rule 93)

"X" opposite station name indicates yard limits.

**11. ENTRANCE SWITCH TO SIDINGS AND OTHER TRACKS**

(Rules 88 to 90)

Unless otherwise provided enter at first switch of first siding. When a train which is to hold the main track is first to arrive at meeting point, fixed by train order, switch must be properly set for opposing train to enter siding.

**12. MAXIMUM SPEED RESTRICTIONS**

(Rules 108 and 1305)

Between Pomona and Winston-Salem  
Passenger trains 55 miles per hour. Freight trains 45 miles per hour.

Between Winston-Salem and Barber  
Passenger trains 50 miles per hour. Freight trains 40 miles per hour.

Between Barber and Charlotte  
Passenger trains 55 miles per hour. Freight trains 40 miles per hour.

Between Winston-Salem and N. Wilkesboro  
Passenger trains 45 miles per hour. Freight trains 35 miles per hour.

Between Mooresville Junction and Statesville  
Freight trains 40 miles per hour.

Between Mt. Airy and Sanford  
Freight trains 30 miles per hour.

Between Climax and Ramseur  
Freight trains 20 miles per hour.

These speeds must be further reduced on curves where conditions require it to insure safe and comfortable movement.

The maximum speed of freight trains handling loaded hopper bottom coal cars, or flat cars loaded with creosoted poles, or gondolas loaded with lumber that extends above the sides of the car, will be forty (40) miles an hour. Except Mt. Airy, Sanford Line thirty (30) miles an hour, Ramseur Branch fifteen (15) miles an hour.

Engines without cars will be governed by speed according to class of engines.

Trains or engines must not exceed 15 miles an hour entering or leaving sidings or moving through crossovers or turnouts; except where turnout is No. 16 or over, speed of 20 miles an hour must not be exceeded.

Unless otherwise restricted, trains will not exceed maximum speed on curves as shown below:

## WINSTON-SALEM 10

The red aspect must also be displayed when a train crosses over, or is using opposite main track against current of traffic—or on single track when such train fails to clear main track in accordance with the rules.

Opposing trains observing this emergency red light must stop immediately and not proceed until the way is known to be clear.

The red light is an additional precaution and does not relieve train and enginemen from full compliance with Rules 99 and 102.

### Instructions Covering Movement of Sperry and A.A.R. Rail Test Cars.

1. When rail test cars are testing rail, flag protection must be provided to the rear.

2. In territory where trains operate by signal indication in accordance with Rule 261, the dispatcher or operator must be acquainted with proposed movement of a rail test car and not permit an opposing train to enter the block occupied by a rail test car. CTC dispatchers and remote control operators must tag or obstruct levers which govern opposing movement of trains into the block occupied by a rail test car, and the tag or obstructing peg must not be removed until the car is clear of the block.

3. When a rail test car is to test rail within interlocking limits, levermen must be notified of the movement and Rules 616 and 617 complied with so that levers affecting movement of the car will not be manipulated until the car has passed beyond interlocking limits.

4. When testing rail, rail test cars must approach all high-way-railroad grade crossings which are protected by flashing light signals or automatic gates prepared to stop unless it is known that such protective devices are operating.

5. When not testing rail, rail test cars must be handled in accordance with rules applying to other train movements.

## 16. HELPING TRAINS

(Rule 1657)

When it is necessary for a train to push another train on a grade or into a siding, the pusher engine must be detached from its train, after proper measures have been taken for its protection, including setting of hand brakes and such other measures as may be necessary, and after coupling to the rear car of the train to be pushed, the air hose must be coupled and the air operated through; the air pressure must be equalized between the pushing engine and the train to be pushed, and the cut out cock under automatic brake valve closed. This automatically cuts out train control operation on the pusher engine.

When the pusher engine is uncoupled from the train, cut out cock under brake valve must be opened so as to make train control operative.

Position of brake valve handles on the pushing engine to be the same as the second engine on a double header train, and the instructions in books of rules governing the operation of a train with two or more engines, including air brake handling, will govern.

## 17. AIR BRAKE INSTRUCTIONS TO ENGINEMEN AND TRAINMEN (Rules 1650 to 1675)

When brakes are applied in any manner except by engineer's brake valve, close throttle, place automatic brake valve on lap and allow it to remain on lap until train comes to a stop.

The application of brakes in this manner will be indicated by—Steam Locomotives—Pressure on brake cylinder air gauge, train pulling hard or slowing down.

Diesel-Electric Locomotives—Brake cylinder pressure on air gauge, train pulling hard, speed indicator falling in miles per hour, or transition indicator moving toward the red.

If necessary to prevent sliding of driving wheels, the driving brake cylinder pressure can be graduated with the independent brake valve.

When an emergency application is made, allow automatic brake valve to remain on lap at least two (2) minutes before releasing.

When train is stopped under such circumstances, it must not proceed until proper signal is given.

Before giving signal to proceed, trainmen must know the brakes are released and pressure is being restored.

## 18. SPRING SWITCHES

(Rules 517 and 1642 to 1645)

When any part of a train is moving through a spring switch the speed must not exceed fifteen miles per hour, except at the ends of double track where speed must not exceed twenty miles per hour.

Spring switches are located as follows:

East end Lead track Salem Yard—

Trailing movements may be made through these switches without opening or closing by hand, but in case a train is stopped before passing entirely through the switch, it must not be backed, unless switch is opened or set to siding by hand.

"S S" signs are located adjacent to spring switches, and will also, when practicable, indicate the location of clearance point for adjacent track, unless "Clear This Post" sign is used.

WHEN NECESSARY, PASSENGER TRAINS WILL WAIT FOR CONNECTIONS AS INDICATED BELOW. SUPERINTENDENT OR CHIEF DISPATCHER WILL INSTRUCT IN CASES OF UNUSUAL CONDITIONS OR EMERGENCIES.
